litle and Abstract		JOURNAL CONTENT
Title *	PENGARUH KADAR IMPURITIS PADA MOLTEN ALUMINIUM TERHADAP SGA	Search
Abstract *	Salah satu pemasok kebutuhan aluminium dunia dan Indonesia adalah PT INALUM (Persero) dengan kapasitas produksi masih sebesar 260.000 ton per tahun. Produk aluminium yang dihasilkan pada PT INALUM (Persero) terdiri dari ingot, alloy dan billet dengan tingkat kemurnian yang berbeda. Namun selain 3 produk tersebut ada produk lain yang juga memiliki nilai jual lebih tinggi, yaltu produk S1-B. Dalam proses peleburan aluminium pastilah tidak dapat dihasilkan aluminium yang 100% murni, terdapat zat pengotor didalam hasilnya. Dalam hal ini, zat pengotor yang lebih dicermati adalah silikon (Si) dan besi (Fe). PT INALUM memberikan beberapa standar terhadap kemurnian dari aluminium. Pengujian komposisi bertujuan untuk mengetahui kadar pengotor yang terkandung pada sample aluminium. Pengujian ini dilakukan menggunakan OES (Optical Emission Spectrofotometer). Pengujian ini dimulai dari pengambilan sample Test Product Metal (TPM) aluminium cair, kemudian sample tersebut didinginkan dan setelah itu sample dikirim ke bagian Smelter Quality Assurance (SQA) untuk mengetahui kemurnian dan kandungan zat pengotornya. Berdasarkan hasil analisis, aluminium yang memungkinkan dicetak adalah qrade S1-A dengan kadar aluminium 99,92% dan S1-B dengan kadar	##plugins.block.navigation.searchSc All ~ Search Browse • By Issue • By Author • By Title • Other Journals
